Running CPAIS with Windows 7.

Below is a quick view of the steps needed to run CPAIS application with Windows 7.

For more details on following steps, reference documents **CPAIS Desktop Setup Procedures** and **CPAIS Access Issues and Solutions** located on the CPAIS web page.

1) Install Java Runtime Environment (JRE) as instructed in the "CPAIS Desktop Setup Procedures" link.

2) Use the JVM.DLL file from the "Install JVM.DLL", link listed on the CPAIS web page (if necessary).

3) Copy this JVM.DLL file to all Java' \hotspot\ folders, including the \Program Files (x86)\Oracle\Java 1.3.1.26\bin\hotspot\ folder.

4) Run the CPAIS application using the 32-bit version of Internet Explorer. Because Windows 7 comes with both the 32-bit and the 64-bit Internet Explorer browser versions, ensure that the version used is the 32-bit version of Internet Explorer.

5) In the 32-bit Internet Explorer browser version, make sure that Java 1.3.1.26 is Enabled.

6) Have the following URLs as trusted sites within the browser.
